SUMMARY

Python Developer with nearly 2 years of experience in designing and developing backend web applications using Python, Django, FastAPI, SQLAlchemy, SQL Server, and MongoDB. Experienced in developing RESTful APIs, implementing authentication, database design, and building business applications with clean and maintainable code.

Prior to transitioning into software development, gained 12 years of experience as a Mobile Service Engineer, developing strong troubleshooting, analytical, and customer support skills. Passionate about backend development and continuously improving technical expertise in modern Python technologies.

EDUCATION

University of Madras

Bachelor of Computer Applications (Distance Education)

SCSM Polytechnic, Namakkal

Diploma in Electronics & Communication Engineering

EXPERIENCE

Python Developer

INFOEM SOLUTION

(Update with your correct joining date and Present)

Namakkal

Responsibilities

- Developed backend web applications using Python, Django, and FastAPI.
- Designed and implemented RESTful APIs for business applications.
- Built database models using SQLAlchemy ORM.
- Developed CRUD operations for multiple application modules.
- Worked with SQL Server and MongoDB databases.
- Implemented authentication and authorization mechanisms.
- Integrated backend APIs with frontend applications.
- Fixed bugs and optimized backend performance.
- Participated in application maintenance and feature enhancements.
- Used Git for source code management and collaboration.

Mobile Service Engineer

12 Years Experience

Responsibilities

- Diagnosed and resolved hardware and software issues in mobile devices.
- Installed and upgraded Android operating systems and firmware.
- Performed hardware troubleshooting and component replacement.
- Delivered technical support and customer service.
- Maintained service quality and ensured timely issue resolution.
- Built strong analytical, troubleshooting, and problem-solving skills through hands-on technical work.

PROJECTS

MilkDB – Milk Collection & Billing Management System | MilkDB is a backend application developed for managing milk collection centers. The application streamlines customer management, milk procurement, loan tracking, billing, and reporting through RESTful APIs. Technologies Used: Python • FastAPI • SQLAlchemy • SQL Server • REST API

- Customer Management

- Milk Collection Entry
- Loan Management
- Billing Management
- Reports
- Authentication
- Role-based Access
- Designed and developed REST APIs using FastAPI.
- Built SQLAlchemy models and managed database relationships.
- Implemented CRUD operations for customers, milk entries, and loan modules.
- Developed loan creation and loan deduction functionalities.
- Connected and managed SQL Server database operations.
- Validated request and response models using Pydantic.
- Tested APIs using Postman.
- Improved backend performance by optimizing database queries.
- Maintained modular and scalable backend architecture.
